

From this chapter you can learn how to search for restriction sites on a DNA sequence.

Open a DNA sequence in and click the following button on the *Sequence View* toolbar:

The *Find restriction sites* dialog appears:

You can see the list of restriction enzymes that can be used to search for restriction sites. The information about enzymes was obtained from the [REBASE](#) database. For each enzyme in the list a brief description is available (the accession ID in the database, the recognition sequence, etc.). If you're online you can get more detailed information about an enzyme selected by clicking the *REBASE Info* button.
