

Fetching Sequences from Local BLAST Database

To fetch sequences from local BLAST database use the *Fetch sequences from local BLAST database->Fetch sequences by 'id' from 'blast result'* context menu item of the blast result. The following dialog will appear:

The dialog box is titled "Fetch Sequence from BLAST Database". It contains the following fields and controls:

- Enter query ID:** A text input field containing the text "gi|2801474|gb|AF033813.1|AF033813".
- Select database :** A label above the database path and base name fields.
- Database path:** A text input field.
- Base name for BLAST DB files:** A text input field.
- Output path:** A text input field with a browse button (three dots) to its right.
- Buttons:** "Fetch", "Cancel", and "Help" buttons at the bottom right.
- Checkbox:** "Add to project" checkbox, which is checked.
- Additional Button:** A button labeled "Select a database file" next to the database path field.

Here you need select a query ID, database, type of file(s) and output path. After that click on the *Fetch* button. To fetch sequences for several annotations at the same time select the blast results with *Ctrl* key and call the *Fetch sequences from local BLAST database->Fetch sequences by 'id' from 'blast result'* context menu item.
