

Fetching Sequences from Local BLAST Database

To fetch sequences from local BLAST database use the *Fetch sequences from local BLAST database->Fetch sequences by 'id' from 'blast result'* context menu item of the blast result. The following dialog will appear:

The dialog box is titled "Fetch Sequence from BLAST Database" and features a standard Windows-style title bar with a question mark icon and a close button (X). The main content area is organized into several sections: a text input field for "Entry query ID:"; a "Select database :" section with a text input field and a browse button (three dots); a "Type of file(s)" section with two radio buttons, "nucleotide" (selected) and "protein"; an "Output path:" section with a text input field and a browse button; and a checked checkbox labeled "Add to project". At the bottom right, there are three buttons: "Fetch", "Cancel", and "Help".

Here you need select a query ID, database, type of file(s) and output path. After that click on the *Fetch* button.
